Micro base station are small and lightweight base stations that enhance the capacity and coverage of wireless networks. They are typically used in dense urban areas, where high user ...

In this work, we propose a novel approach of BSs deployment for the next-generation 5G network in millimeter wave (mmWave) frequencies using meta-heuristic algorithms.

It offers an in-depth study, performance analysis and extensive characterization of novel antennas for 5G applications.

In this article, a dual polarization millimeter wave antenna based on differential feeding structure is proposed. The antenna achieves dual polarization through differential feeding.

he next-generation 5G network in millimeter wave (mmWave) frequencies using meta-heuristic algorithms. The scope is to find the optimized position of each BS using mmWave frequencies ...

Toward economical social implementation of wireless communication systems using millimeter-wave, which will be essential for broadband wireless communication in the 5G and 6G eras, ...

Representative applications include mmWave base station antennas in 5G systems, terahertz (THz) imaging systems employed in ...

In the first section, we will discuss some of the leading use cases for millimeter wave communications and set the stage for the analysis that follows. In the second and third ...

Millimeter wave (mm-Wave) wireless communication systems require high gain antennas to overcome path

5g millimeter wave communication micro base station

loss effects and thereby enhance system coverage. This paper presents the ...

Representative applications include mmWave base station antennas in 5G systems, terahertz (THz) imaging systems employed in medical diagnostics and security ...

In the fifth-generation (5G) technology for broadband cellular networks, one of the striking problems is the millimeter wave (mmWave) transmission that enables
