How do I remotely control the radio?

You can remotely control the radio only if on the Base Station Remote Utility Software is up and running. The software should NOT be connected to the Radio under Radio list and Server List. When you remotely connect to your radio, this screen will show the BUSY icon. Click Start. Click Run.

How does 4dqpsk modulation work?

If the Base station communicates with Terminal 5, it uses the ?/4DQPSK modulation even for the hop between the Base and Repeater, not only for the link between Repeater and Terminal 5. All units are configured with a Radio IP address within 10.10.10.0/24 subnet. The Ethernet subnets are different for each unit.

How do I change a pre-cabled protected station?

Page 417 Product Options | 417 Users can change an existing Protected Station from one option to the other option by following the procedure: To change a pre-cabled Protected Station from one option to the other option: 1. Disconnect the power supply, antenna/s, interface cables and any other connections 2.

Is there a repeater configuration in Terminal 4?

There is no"repeater" configuration in Terminal 4. The terminal itself is configured in the exact same way as Terminals 5 and 6. The communication is managed by the Base station which forwards data either directly or via this repeater. Since the firmware 1.6,RipEX units can also be configured with various modulation rates for individual links.

An IP Network Remote Interface provides a means of remotely controlling base stations by any available Wide Area Network (WAN) or Local Area Network (LAN) IP connection.

Enable Network Extension Mode on all radios required in the extended network radio list including the radio logged into, the remote radio being ...

HGM4020T genset controller adopts micro-processor technology with precision parameters measuring, fixed value adjustment, time setting and set value adjusting and etc functions. All ...

The topology consists of one Base station (there can only be one) and 6 terminals (remote RipEX units). One of these terminals serves as a ...

You can remotely control the radio only if on the Base Station Remote Utility Software is up and running. The software should NOT be connected to the Radio under Radio list and Server List.

The Installation Wizard is the first screen you"ll encounter if the Base Station is new and not yet configured. You will need your installer"s password to access the Installation Wizard.
