Are US power companies relying on Chinese inverters?

Research shared exclusively with The Washington Post reveals how deeply dependent U.S. power companies are on Chinese inverters. These devices are used by large solar installations to help transform energy harnessed from the sun into a current that is compatible with the power grid.

Are solar inverters made in China?

Research from energy consulting firm Wood Mackenzie found that about 78% of all solar inverters are made in China. The Center for a Prosperous America estimates that Chinese companies account for 39% of the U.S. solar module capacity. These statistics highlight just how deeply embedded Chinese technology has become in America's clean energy grid.

Are Chinese solar power inverters Rogue?

However, rogue communication devices not listed in product documents have been found in some Chinese solar power inverters by U.S. experts who strip down equipment hooked up to grids to check for security issues, the two people said.

Will Chinese solar inverters evade state-specific bans?

If not, China will continue to evade state-specific bans, with new vulnerabilities capable of emerging from wherever inverters are produced next. Undocumented radios found in Chinese-made solar inverters pose a threat to U.S. energy infrastructure and security, enabling disruption of critical systems.

In a plot twist worthy of a techno-thriller, U.S. energy officials have uncovered rogue communication devices embedded within Chinese-manufactured solar power inverters.

Every solar panel and battery connected to the U.S. energy grid relies on a device few people ever consider: the power inverter. In ...

LONDON, May 14 (Reuters) - U.S. energy officials are reassessing the risk posed by Chinese-made devices that play a critical role in renewable energy infrastructure after unexplained...
