-----

But even as renewables made gains, U.S. emissions stayed flat owing to rising demand for energy. Last year wind and solar produced around 16 percent of U.S. power, ...

Some types of renewable energy, like wind and solar power, come from sources that are not depleted when used. Others, like biomass, come from sources that can be ...

In the US in 2024, wind and solar accounted for 17% of total electricity generation, surpassing coal, which fell to a record low of 15%, according to a new report from global ...

Renewable energies including wind and solar have surpassed coal as the world's primary source of electricity.

In the US in 2024, wind and solar accounted for 17% of total electricity generation, surpassing coal, which fell to a record low of 15%, ...

But even as renewables made gains, U.S. emissions stayed flat owing to rising demand for energy. Last year wind and solar produced ...

Coal may yet hold off wind and solar with a strong five months to close 2024. But renewables are likely to overtake the former king of the power sector sooner rather than later.

New data shows impressive growth of renewables, driven largely by solar and battery storage

As traditional coal plants grow older, we're seeing a rapid increase in the use of renewable energy sources such as wind and solar power. This shift is not just about replacing ...

Some types of renewable energy, like wind and solar power, come from sources that are not depleted when used. Others, like ...

The U.S. electricity generation landscape experienced a pivotal transformation in 2024 as wind and solar energy sources exceeded coal for the first time. This significant market ...

Oil and gas in particular, but also coal, still play a huge role in global energy systems. But solar, wind, and batteries are not surging ahead.
