OverviewOperationPayment for injected powerTypesDatashetsExternal linksGrid-tie inverters convert DC electrical power into AC power suitable for injecting into the electric utility company grid. The grid tie inverter (GTI) must match the phase of the grid and maintain the output voltage slightly higher than the grid voltage at any instant. A high-quality modern grid-tie inverter has a fixed unity power factor, which means its output voltage and current are perfectly lined up, and its phase angle is within 1° of the AC power grid. The inverter has an internal com...

Solar energy, abundant and environmentally friendly, has been effectively used in both independent and grid-connected applications, establishing it as one of the top choices ...

Aside from the modes of operation, grid-connected inverters are also classified according to configuration topology. There are four different ...
