The goal of this review is to provide researchers and practitioners with a deep understanding of the current state-of-the-art in parallel inverter control and foster further advancements in this field.

This paper proposes an improved virtual synchronous generator (VSG) control strategy to address these issues, ensuring stable and efficient coordination of parallel ...

Therefore, based on the interleaved decoupling method, a new topology of photovoltaic grid-connected inverter and its corresponding ...

Finally, simulation experiments are carried out. The results show that this method can effectively suppress the resonance of the multi-inverter parallel system and can ...

The hybrid photovoltaic (PV) with energy storage system (ESS) has become a highly preferred solution to replace traditional fossil-fuel sources, support weak grids, and ...

This simulation results confirm that the MG system with parallel operating GSIs can effectively achieve a seamless handover between islanded and grid-connected modes under ...

Therefore, based on the interleaved decoupling method, a new topology of photovoltaic grid-connected inverter and its corresponding control strategy are proposed in this ...

istic alone is unable to ensure successful parallel operation. This work proposes a dynamic-phasor based modeling approach that enables eigenvalue analysis of multi-converter systems ...

and grid-connected operation modes using MATLAB/Simulink platform. The simulation is used to verify the
