As renewable energy sources like solar and wind continue to grow worldwide, the need for efficient, cost-effective storage solutions becomes increasingly urgent.

To spotlight real-world impact, here are six standout cases in Israel's C& I energy storage landscape, showcasing diverse applications from utility-scale hybrids to BTM solutions:

Under the agreement, El-Mor will design and construct battery energy storage systems (BESS) and related infrastructure for multiple projects, totaling 1.5GWh in capacity ...

The primary goal of these new storage facilities is to capture renewable energy generated in southern Israel in daytime and deliver it to consumption centers in central Israel ...

To help Israel's industrial and commercial energy transition, GSL Energy and Deye have jointly created a highly efficient and flexible energy storage demonstration project.

Ormat Technologies has secured tolling agreements for two separate energy storage facilities with a combined capacity of around 300 MW/ 1200 MWh in a tender issued ...

cutting-edge projects transforming how the nation manages its power grid.

HiTHIUM partners with El-Mor for energy storage projects in Israel, expanding into the international long-duration market.

This project will mark HiTHIUM's first major overseas deployment of its long-duration energy storage technology, advancing both companies' roles in driving the global clean energy transition.

El-Mor will design and build battery energy storage systems (BESS) and related infrastructures for multiple projects with a total capacity of 1.5GWh and total power of 300MW.
