-----

China has successfully completed the first flight of its home-designed floating wind turbine, the S1500, in Hami, Xinjiang. The system passed strict tests, including full desert ...

China has successfully completed the first flight of its home-designed floating wind turbine, the S1500, in Hami, Xinjiang. The system ...

In wind energy, the capacity of a wind turbine is measured in megawatts. This capacity refers to the maximum amount of electricity that the turbine can generate under ...

Chinese scientists expect to soon make a breakthrough in airborne wind turbine technology, with the world's first megawatt-level system set to take flight, according to the project team.

China is preparing to test a groundbreaking airborne power generation system that looks like an airship but functions like a wind turbine.

This study performs crucial simulations and analyses, including load flow and short circuit, to evaluate the design of a five-megawatt offshore wind turbine according to International ...

The rated power of wind turbines has consistently enlarged as large installations can reduce energy production costs. Multi-megawatt wind turbines are frequently used in ...

Modern wind turbines are increasingly cost-effective and more reliable, and have scaled up in size to multi-megawatt power ratings. Since 1999, the average turbine generating capacity has ...

Industry-leading power performance, and the first wind turbines with an AI-powered digital blade quality certificate. Configured for reduced complexity and ease of project execution, with more ...

The world's first megawatt-class high-altitude wind power system for urban use, the S2000 SAWES, has successfully completed a test flight in Yibin, Southwest China's Sichuan ...

A combined wind-wave energy generation concept based on a 15 MW class wind turbine is presented.
