-----

diction-dependent dispatch methods can face challenges when renewables and prices predictions are unreliable in microgrid. Instead, this paper proposes a novel prediction-free two-stage ...

Distributed economic dispatch algorithms, leveraging edge computing for local optimization and inter-agent communication for collaborative decision-making, offer a promising solution.

Simulation examples demonstrate that, compared to traditional SSA and ISSA algorithms, the proposed algorithm has the advantages of shorter computation time and higher solution ...

This paper proposes a novel prediction-free two-stage coordinated dispatch framework for the real-time dispatch of grid-connected microgrid with generalized energy ...

In this study, a grey wolf optimization (GWO) algorithm was proposed and compared with genetic algorithm (GA) and PSO to determine the optimal solution for microgrid ...

This study proposes a multi-objective scheduling optimization algorithm based on reinforcement learning. This method constructs a deep reinforcement learning framework with Actor-Critic as ...

f a well-designed control architecture to provide efficient and eco-nomic access to electricity. This paper presents the development of a flexible hourly day-ahead power dispatch architecture for ...

This work compares the performance of three optimization methods for solving the economic dispatch problem (EDP) in microgrids with energy storage systems (ESSs).

It explores the integration of hybrid renewable energy sources into a microgrid (MG) and proposes an energy

dispatch strategy for MGs operating in both grid-connected and ...

This study proposes an advanced day-ahead economic dispatch framework for wind-integrated microgrids, utilizing coordinated energy storage and a hybrid DR strategy.
