Pulse power leverages 5G base stations' ability to analyze traffic loads. In 4G, radios are always on, even when traffic levels don't warrant it, such as transmitting reference signals to detect ...

Less than a third of Niger's vast territory has internet access, so the west African country is betting on satellite broadband to bridge the digital divide in remote rural areas.

In November, Niger's military rulers granted a five-year contract with US billionaire Elon Musk's company Starlink to provide high-speed internet access across the Sahel state.

In a significant step toward digital transformation, Niger has signed a five-year agreement with SpaceX's Starlink to bring satellite internet service across the nation.
