This project will combine advanced research on the isothermal compression/expansion process with the development of a robust, ...

Why Eastern Europe Needs Flexible Energy Storage As Romania aims to achieve 24% renewable energy penetration by 2030, the Bucharest compressed air energy storage (CAES) ...

Support schemes for battery storage systems in Europe remain a hot topic. Even though such schemes can provide a solid foundation for market growth, long-term success ...

The Romanian government, led by Prime Minister Marcel Ciolacu, has announced a EUR150 million fund for energy storage projects, open for applications until January 17, 2025. This initiative ...

This project will combine advanced research on the isothermal compression/expansion process with the development of a robust, industrial-grade gas compressor stored in a containerised ...

The main objective of the ROCAES project was to demonstrate the technological feasibility and economic efficiency of a low power energy storage solution using compressed air.

For Romania, access to such pioneering technologies signifies a shift toward a more modern energy framework, where businesses can leverage storage to not only cut costs ...

An advanced draft of the present report was critically discussed with relevant Romanian stakeholders (TSO, energy regulator, Ministry of Economy, Energy and the Business ...

Romania expects its overall energy storage to amount to at least 2.5 GW in operating power at the end of

2025, and to expand to as ...

PDF | The paper presents the prototype of the first Romanian Compressed Air Energy Storage (CAES) installation.

Romania expects its overall energy storage to amount to at least 2.5 GW in operating power at the end of 2025, and to expand to as much as 5 GW a year later, local ...

The comparison and discussion of these CAES technologies are summarized with a focus on technical maturity, power sizing, storage capacity, operation pressure, round-trip ...
