Why do schools need shipping container classrooms?

When these situations arise, educational administrators are forced to reconfigure the space they do have and come up with creative ways to meet the needs of their pupils. Shipping container classrooms are an innovative, cost-effective and convenient way for educational facilities to add square footage when they need it most.

How much does it cost to build a shipping container classroom?

Typically, shipping container builds will cost approximately half of what traditional construction would cost per square foot. Example: If a 2,000 sqft traditional classroom would cost \$300,000.00 to build, it would cost approximately \$150,000.00 to build a shipping container classroom of the same size.

How long do shipping container schools last?

Whenever shipping container schools are built, it is reasonable to assume they will remain in use for at least a few months, if not years, and any long-term structure that is going to be occupied regularly requires a foundation that can bear the weight of the construction.

Why do educational institutions choose storage container construction?

This is undeniably one of the most influential reasons why educational institutions opt for storage container construction. Typically, shipping container builds will cost approximately half of what traditional construction would cost per square foot. Example:

Discover our 20ft Solar Energy Container, providing 6 kW of sustainable power with quick setup. Ideal for on-demand, eco-friendly energy.

This is the product of combining collapsible solar panels with a reinforced shipping container to provide a mobile solar power system for off-grid or remote locations.
