How energy is planned in Barcelona?

Energy and the way it is planned in Barcelona is defined by two adjectives: dense and Mediterranean. The 'Mediterranean-ness' and its mild climate make life easier in terms of consumption intended for heating and cooling. Density is an advantage which enables to distribute every used kWh among more people than in other cities.

Why is energy important in Barcelona?

That is the reason why the city promotes renewable energy and encourages improving the environmental quality of the urban environment, focusing on areas such as noise, lighting or air quality. Energy and the way it is planned in Barcelona is defined by two adjectives: dense and Mediterranean.

How much does air conditioning cost in Spain?

10 hours a day costs EUR1.94, which is EUR58.20 per month - a realistic figure for many households. 24-hour use costs EUR4.65 per day, adding up to about EUR139.68 per month. These figures explain why many homeowners in Spain want to know how much does air conditioning cost to run in Spain.

How to reduce energy consumption in Barcelona?

In order to reduce the overall consumption, the City Council ensures reducing Barcelona energy dependence from abroad, and encourages local generation, renewable energy and networking. That is, working towards energy self-sufficiency. The aim is to improve efficiency and reduce emissions of greenhouse gas and other pollutants having a local effect.
