Can battery energy storage improve frequency modulation of thermal power units?

Li Cuiping et al. used a battery energy storage system to assist in the frequency modulation of thermal power units, significantly improving the frequency modulation effect, smoothing the unit output power and reducing unit wear.

What is dynamic frequency modulation model?

The dynamic frequency modulation model of the whole regional power grid is composed of thermal power units, energy storage systems, nonlinear frequency difference signal decomposition, fire-storage cooperative fuzzy control power distribution, energy storage system output control and other components. What is the frequency modulation of hybrid energy storage?

Under the four control strategies of A, B, C and D, the hybrid energy storage participating in the primary frequency modulation of the unit Δf_m is 0.00194 p.u.Hz, excluding the energy storage system when the frequency modulation Δf_m is 0.00316 p.u.Hz, compared to a decrease of 37.61 %.

Can photovoltaic power stations be controlled by a joint frequency modulation optimization?

The result of this project can also be extended and applied to the primary frequency control of grid-connected photovoltaic power stations in the power grid, and even further applied to the joint frequency modulation optimization control of the multi-energy complementary interconnected power system of the power grid.
