In hot climates, solar control glass can be used to minimise solar heat gain and help control glare. In temperate regions, it can be used to balance solar control with high levels of natural light.

The special properties of solar control glass let natural daylight in, while reflecting a high proportion of the sun's heat. The indoor space remains bright but cooler compared to ...

Take a look at how solar control glass and laminated glass - either individually or combined - help to maintain a comfortable home, with views and natural light and reduce the risk of ...

One of the most widely-used and versatile forms of heat-resistant glass is borosilicate glass, invented by Otto Schott in 1887. This revolutionary glass is formed by adding a high ...

Additional glass performance options include SmartSun(TM) glass that blocks 95% of the sun's harmful UV rays and PassiveSun(TM) glass that brings the heat from sunlight into your home.

Learn all about solar control glass in this comprehensive guide. Discover its benefits, types, and applications, and how it can improve the energy efficiency.

Our SILVERSTAR SUNSTOP coatings are suitable for use in warm climates and in particularly intense sunlight. This means air-conditioning can be reduced or avoided altogether - even ...

SageGlass™; automatically tints and clears in response to changing weather conditions thanks to a sensor installed on a roof or facade of a building. This innovative glass optimizes daylight ...

Heat-resistant glass plays a crucial role in maximizing solar energy reliability and efficiency in modern photovoltaic systems. The integration of specialized heat-resistant glass ...

Elevate your building's efficiency with our high-quality solar control glass designed for heat reflection and UV protection. Perfect for both residential and commercial applications, our solar ...
