What is a solar power system?

A solar power system is a simple, yet highly sophisticated assembly of components designed to work with one another--each playing a vital role in the process of converting sunlight into usable electricity. The three primary components of a solar power system are the panels, inverters, and battery storage.

What should you consider when buying solar panels?

Here are a few considerations to keep in mind while you're shopping for solar panels or solar panel kits: Cost per watt: Panels come in all sizes. Divide the panel price by its wattage rating to compare the cost of solar panels on a level playing field. Efficiency rating: High-efficiency panels are great if you have limited space to work with.

What equipment do you need to go solar?

To go solar, you'll need solar panels, inverters, racking equipment, and performance monitoring equipment--at a minimum. Depending on where you live, you may also consider a solar battery. The components of a solar panel system are pretty simple.
