-----

All net new generating capacity in 2026 is forecast to be provided by renewables and batteries, according to new EIA data.

63 GW of utility-scale generation capacity will be brought online this year, and 81% of that capacity will be solar and battery storage, said the Energy Information Administration.

The EIA has also stated that developers and power plant owners plan to add 30 gigawatts (GW) of new utility-scale generating capacity to the U.S. power grid by 2025, ...

Solar and battery storage to make up 81% of new U.S. electric-generating capacity in 2024, Developers and power plant owners plan to add 62.8 gigawatts (GW) of new utility-scale ...

Solar and energy storage accounted for 84% of new electricity generation capacity added to the U.S. power grid last year, but the industry faces a challenging future with the new ...

With a planned photovoltaic capacity of 690 megawatts (MW) and battery storage of 380 MW, it is expected to be the largest solar project in the United States when fully ...

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record ...

While solar power grabs headlines, battery storage capacity is the silent enabler of this transformation. Developers installed 5.9 GW of storage in the first half of 2025, mainly in ...

Solar generation capacity is a primary determinant of how much electricity can be stored. On average, residential solar PV systems range in capacity from 5 kW to 15 kW.

Battery storage capacity is also on a sharp rise. In 2025, 18.2 GW of utility-scale battery storage is forecasted, up from 10.3 GW added in 2024. These systems don't generate ...
