What is uninterruptible power supply?

Uninterruptible Power Supply protects your electricals from the adverse effects of brownouts, spikes and power outages. An uninterruptible power source or uninterruptible power supply is a power supply system responsible for providing emergency load in case of power failures.

Why should a Home Office have an uninterruptible power supply?

Having an uninterruptible power supply will protect your home office from power surges and more. Some of the most common household appliances should not be plugged into a UPS system. This is because their average draw is very high and can put strain on the UPS potentially damaging it.

What are the different types of uninterrupted power supplies?

There are 3 different types of uninterrupted power supplies: This is the most basic type of UPS system available. These UPS systems immediately switch on when they detect an interruption in municipally supplied power (for example during load shedding).

Do you need an uninterrupted power supply for load shedding?

With load shedding in its 14th year (as of 2022) an uninterrupted power supply is essential. What Are the Different Types of UPS? There are 3 different types of uninterrupted power supplies:
