Which countries install the most solar panels in Europe?

Germany has regained its position as the leading country for solar installations in Europe, adding 14.1 GW in 2023. Following Germany, Spain and Italy have also made significant contributions, with 8.2 GW and 4.8 GW installed respectively. Poland and the Netherlands round out the top five with 4.6 GW and 4.1 GW, respectively.

Which countries offer financing for solar panels?

Across Europe, governments also offer direct financing to citizens investing in solar power, though the amounts and conditions vary dramatically. Hungary leads with generous subsidies, covering up to two-thirds of solar panel costs for homeowners, provided they meet specific requirements and invest in energy storage as well.

Why is Europe relying on a single region for solar modules?

Europe's solar industry heavily depends on imported solar modules and components. Recent geopolitical uncertainties and manufacturing bottlenecks have highlighted the risks of relying on a single region for critical parts. Tariffs, trade disputes, and COVID-related disruptions have made procurement more complex and costly.

Implications:

Western Europe experienced one of its sunniest springs since records began, with solar radiation significantly above historical long-term ...

Our "Western Europe solar PV market outlook 2025" breaks down the main solar market drivers, opportunities and barriers for large-scale development and distributed solar PV ...

Over the past decade, solar energy has become a cornerstone of Europe's transition to clean energy. Thanks to ambitious climate targets, widespread public support, and ...

The EU has doubled its solar capacity in the last three years. How have subsidies made this possible, what support is still available, and what still needs to happen?

Sunny summer conditions delivered record photovoltaic (PV) production across much of western Europe in June 2025, as high ...

In a new weekly update for pv magazine, Solcast, a DNV company, reports that a surge in sunshine has resulted in record-breaking solar generation across several European ...

Sunny summer conditions delivered record photovoltaic (PV) production across much of western Europe in June 2025, as high pressure systems brought sustained clear ...

The EU has doubled its solar capacity in the last three years. How have subsidies made this possible, what support is still available, ...

More than a third of Dutch homes have switched to solar - a remarkable achievement that puts its streets ahead of every other country in Western Europe, despite having a similar climate to ...

While outright comparisons of solar capacity can be skewed by population size, evaluating solar PV capacity per capita provides a clearer picture of each country's solar ...

Western Europe experienced one of its sunniest springs since records began, with solar radiation significantly above historical long-term averages. This information was reported ...

The Global Solar Atlas provides a summary of solar power potential and solar resources globally. It is provided by the World Bank Group as a free service to governments, developers and the ...
