A function is like a machine that takes an input and gives an output. Let's explore how we can graph, analyze, and create different types of functions.

About this unit A function is like a machine that takes an input and gives an output. Let's explore how we can graph, analyze, and create different types of functions. Unit guides are here! ...

This topic covers: - Evaluating functions - Domain & range of functions - Graphical features of functions - Average rate of change of functions - Function combination and composition - ...

Create functions that match one variable to the other in a two-variable equation. Functions are written using function notation.

There's another powerful thing we can do with functions - we can use them to take in some values, compute them, and return a new value. Think about all the things you can do with a ...

Using function notation to describe rules (part 1) Learn Worked example: Evaluating functions from equation

In this unit, we learn about functions, which are mathematical entities that assign unique outputs to given inputs. We'll evaluate, graph, analyze, and create various types of functions.

Equations and functions are not the same thing, but they can be related in several ways. Watch Jesse Roe and Sal talk about the difference between equations and functions.

What are rational functions? How do we plot them? What is their domain and range? Let's find out. We break down the definition of the function given in set-builder form and plot the graph ...

Functions assign a single output for each of their inputs. In this video, we see examples of various kinds of functions.
