Which TETRA base stations are based on Airbus DS?

They are all based on the Airbus DS third-generation base station platform. The TB3 base station is the most advanced TETRA base station available in the market today and boasts features such as six (6) receiver diversity providing for superior RF coverage.

What is a TB4 base station?

The TB4 is the first hybrid base station that supports both Tetra and 4G/5G technology on the same hardware platform. Made on a smaller scale and fully adaptable, the new Tetra base station carries all the same powerful features as the popular Tetra TB3 base station, and more.

Is the Airbus TETRA system scalable?

The Airbus TETRA system is scalable from a local to a nationwide network. Additionally, we offer two choices for easy setup: The TB4, developed through a partnership between Airbus and Nokia, is a hybrid base station that supports both TETRA and 4G/5G technologies.

What is Airbus TB4?

The TB4, developed through a partnership between Airbus and Nokia, is a hybrid base station that supports both TETRA and 4G/5G technologies. As part of the smart Tetra evolution and the latest 5G ready device, it offers a longer lifetime with less power required, as well as minimum heating and cooling.

The TB4 plays a key role in Airbus' ecosystem approach; it is based on Nokia's AirScale base station platform and will enable its customers to benefit from a long Tetra ...
